How the Trainthepainter programme works

The Trainthepainter applicator training programme was developed by industry experts who are passionate about training in the protective coatings industry.

The dynamic, effective and advanced training covers most global industries where protective coatings are used such as marine, offshore, petrochemical and construction and endorsed internationally by SSPC and Lloyds Register.

Providing trainee coating applicators a comprehensive package of training modules that ensure professionalism and an insight into methods of surface treatment and application of protective coatings.

Training can only be delivered by experienced and qualified trainers who successfully complete the Train the trainer course.

The trainer must ensure that the organisation/contractors have suitable facilities to conduct both the theoretical and practical training. The training is conducted with the use of a high quality training programme which uses animations and videos to complement the text and handout material.

The trainer has access to the online training platform and can deliver training online through the website or offline using the App.

The trainer may work for an organisation/contractor or independently as a training provider, consultant or training specialist with a coating supplier or equipment supplier.

Students are issued with an ID card as evidence of the completion for modules in protective coating application, abrasive blast cleaning or spray painting. Inexperienced students will hold a temporary orange card for 12 months until experience is gained. Personnel with over 24 months experience will be issued with an internationally recognised coating application ID card.

The training programme covers both marine new building, dry-docking and repair and onboard ship maintenance.

The training programme covers offshore construction, offshore maintenance including windfarms and wind energy projects

The training programme covers the petrochemical industries including construction and maintenance

The training programme covers construction industries including new build, construction and maintenance.
